

# Omentum, Tumor

(4.13 Omentum\_Tumor); Updated October 5th, 2019 by Kevin S. Thompson, MD

## **SAMPLE DICTATION**

---

(Labeled: \_\_\_\_, \_\_\_\_; \_\_\_\_) Received \_\_\_\_ is a \_ x \_ x \_ cm portion of omentum.

Major pathologic finding(s): There is/are (single/multiple) nodules ranging from \_ cm to \_ cm. Lymph nodes (are / are not) grossly identified. **OR** No masses are identified grossly. Lymph nodes (are / are not) identified.

Other findings:

Specimen Handling: (RS / TE, \_\_\_\_ caps)

## **SUGGESTED SAMPLING**

---

1-3: Samples of various nodules or omental cake and possible nodes if present

## **STAGING CRITERIA (AJCC 8TH EDITION)**

---

- None

## **ADDITIONAL CONSIDERATIONS**

---

- Not all nodules need to be sampled, particularly if numerous.
- Always give the dimensions of the largest tumor deposit. This is often needed for staging.
